1 Overview

IBM® Maximo® Asset Management is an integrated productivity tool and database that helps you manage all of your asset types on a single software platform. Built on a service-oriented architecture (SOA), Maximo Asset Management delivers a comprehensive view of all asset types, their conditions and locations, and the work processes that support them, to provide you with optimal planning, control, audit, and compliance capability.

The Maximo database provides critical information about asset resources, including key attributes, their configuration, and their physical and logical relationships to other resources.

From the start center, you can establish key performance indicators (KPIs) to monitor asset conditions and trigger automated action based on changes. You can create, assign, monitor, notify, and report on key process components such as work orders, service desk tickets, and purchase orders, including status, from start to finish. You can also include attachments, such as maps, pictures, and URLs to each record or task to enhance communication and productivity further.

IBM® Maximo® Asset Management is an asset management life cycle and workflow process management system. With Maximo Asset Management, you can manage your asset operations and business processes. You can also integrate with your existing applications.

2 Logging into IBM Maximo Asset Management

2.1 Sign In

You can access IBM Maximo Asset Management by entering the address (<http://10.244.1.36:9080/emsqa>) on the browser (better to use Mozilla Firefox or Internet Explorer). Below is the login screen for IBM Maximo Asset Management :

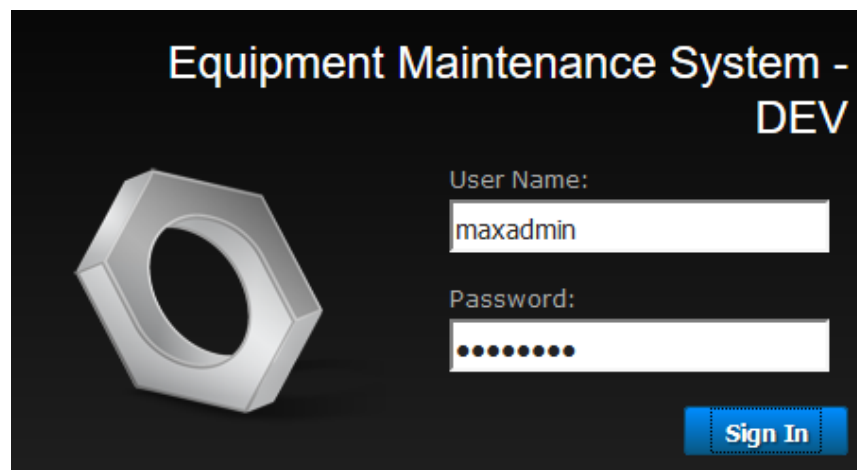

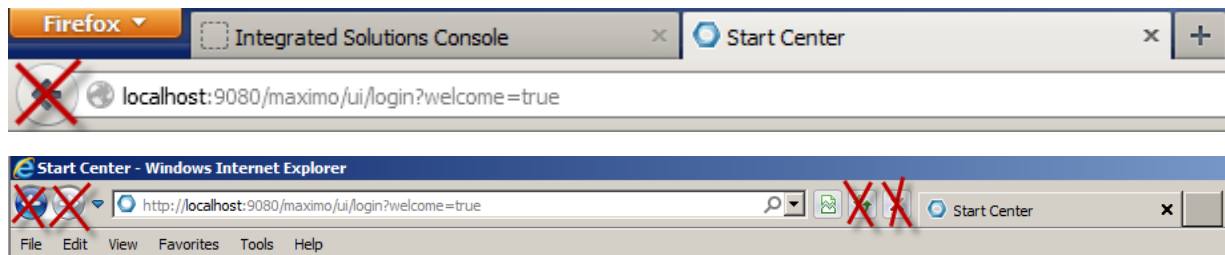

Figure 1. Login Screen

Your System Administrator will provide you with a Username and Password.

NOTE: The password is case sensitive.

2.2 Browser Menu & Icons

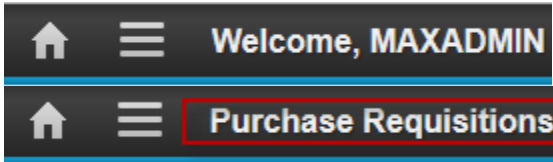

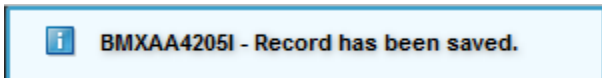

The menu and toolbar icons at the top of the page control your Web browser.

CAUTION: Do not use the browser **Forward** and **Back** buttons to navigate within Maximo. These buttons act on the browser, and are not part of the Maximo software.

2.3 Maximo Navigation Bar

Below the browser menu and toolbar is the Navigation Bar, the first part of the Maximo application page. Maximo uses the Navigation Bar to identify the current application, display messages, and display links that let you maneuver among Maximo applications.

Application icon and name shown on the left to identify the current application.		
Message area in the center.	When appropriate, Maximo displays messages in this area. These messages are only informational, and need no response, for example: Record has been saved. 	
Navigation Links in the right corner.	The available links vary depending on which page you are currently using. Possible options include the following links:	
	Bulletins 	Click to display the Bulletin Board and view broadcast messages. This link only appears when there are active Bulletin Board messages.
	Go To 	Click to display a menu of modules, letting you maneuver among modules and applications.
	Reports 	Click to display a menu of modules, letting you maneuver among modules and applications to select an application to run reports against.

	Start Center 	Click to return to your Start Center.
	Profile 	Click to manage the personal information (address, phone, e-mail, and so forth), defaults, and Maximo password recorded on your Maximo person and user records.
	Sign Out 	Click to sign out of Maximo.
	Help 	Click to display the help menu (when selected from application pages), or context sensitive help (when selected from dialog boxes). This link is always available.
	Return	Click to return to the previous application page without selecting a value. Available after you link to another application.
	Return with Value	Click to return to the previous application page with selected value(s). Available after you link to another application.

2.4 Sign Out

Do not exit an application by closing the browser. To ensure that the connection between your user name and the Maximo server is severed, you should always use the Sign Out link in the Navigation Links to exit Maximo before closing the browser.

3 User Interface & Navigation

3.1 IBM Maximo Start Center

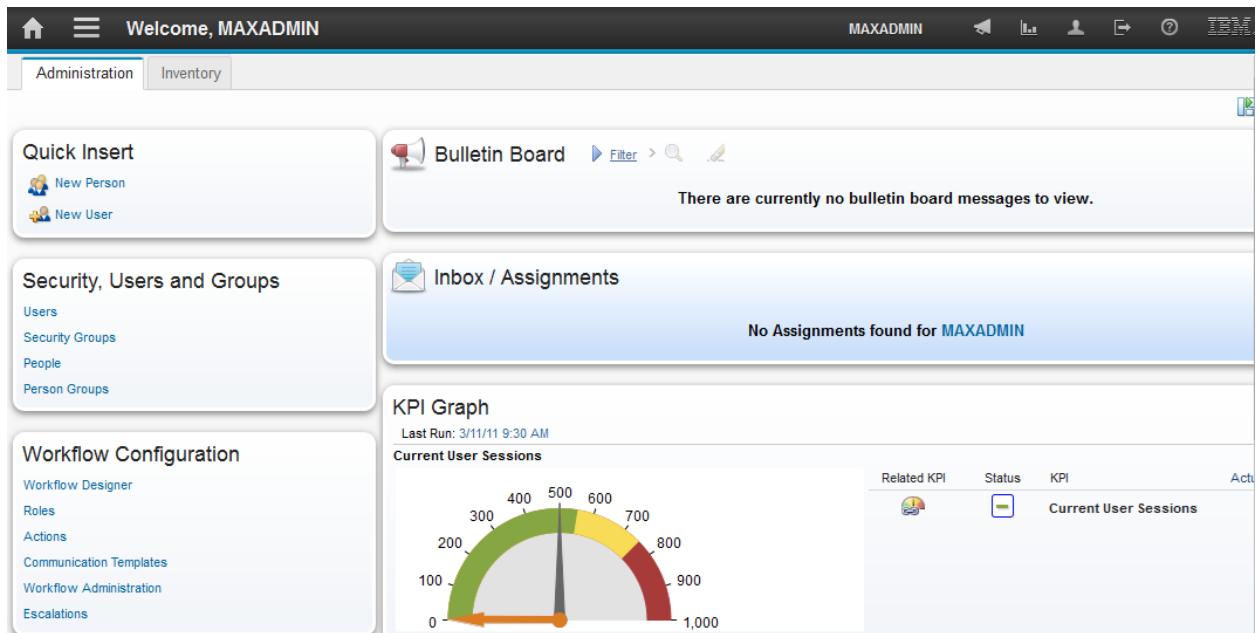

After you sign in, Maximo displays your Start Centre. A Start Centre contains links to actions, applications, data, records, and/or reports that are relevant to your job. Start Centres are assigned to security groups by a system administrator using the Security Groups application. If your user name is assigned to more than one security group, you may have more than one Start Centre.

Start Center Components

A Start Centre consists of two columns, one narrow and one wide. Each column can be configured to display one or more portlets, or windows, which display data, links, or reports that are available in a specific Maximo application. The portlets that make up a specific Start Centre are often chosen to support a particular job function, and can include any of the following:

Bulletin Board	Displays Bulletin Board messages.
-----------------------	--

Favorites Applications	Displays links that allow you to launch specific Maximo applications.
Inbox/Assignments	Displays your Workflow Inbox, which contains records that have been routed to you and that require some sort of action, for example, review and approval.
KPI Graph	Displays one or more Key Performance Indicator (KPI) graphs.
KPI List	Displays a list of links to one or more Key Performance Indicator (KPI) records in the KPI Manager application.
Quick Insert	Displays a list of links that allow you to launch an application and add a new record into the database, for example create a New Work Order.
Result Set	Displays the result set from a saved query.

There are several ways to open a Maximo application from your Start Center.

Go To link in the Navigation Links	To open an application, click the Go To link in the Navigation Links, and then select the module and application. For example, to open the Work Order Tracking application Select Go To → Work Orders → Work Order Tracking.
Favorite Applications portlet	To open an application, click the application link in the Favorite applications portlet. For example click Work Order Tracking.
Inbox/Assignments	To open an application and view a record that has been assigned to you for

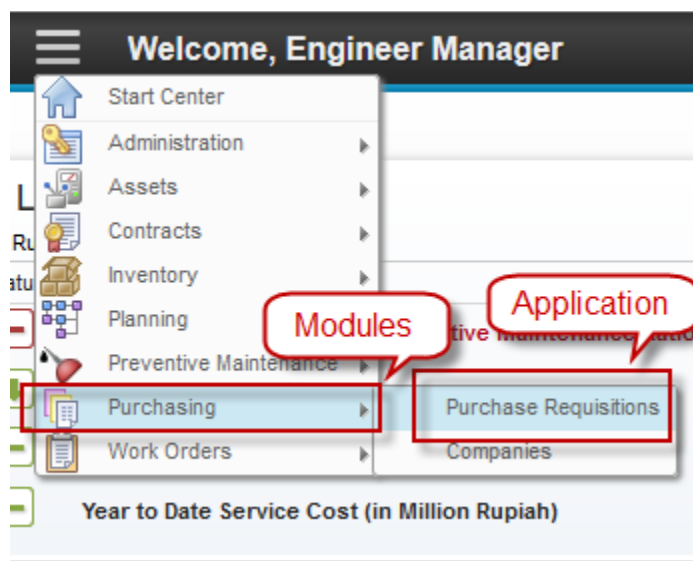

portlet	action, click the record ID.
Quick Insert portlet	To open an application and insert a new record, click the link in the Quick Insert portlet, for example New Work Order.
Result Set portlet	To open an application and view a specific record, click the record ID in the Result Set portlet.

3.2 Navigating IBM Maximo Applications

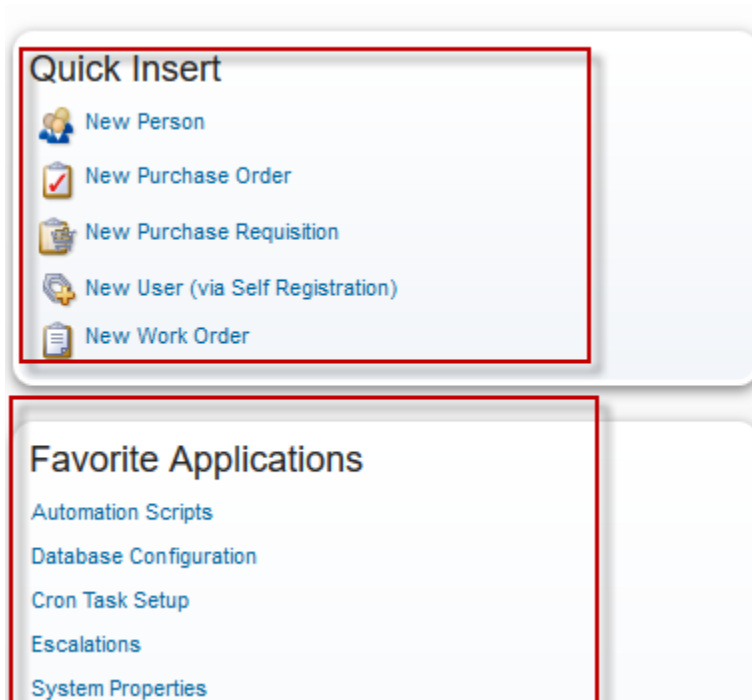

IBM Maximo provides flexibility in navigation from application to application

- Using the Go To Link
Once inside an application you can navigate between applications by using the GoTo link located on the Navigation Bar in the upper right portion of the screen.

Clicking the GoTo link causes a drop-down menu to display, as shown above, from which modules and applications may be selected.

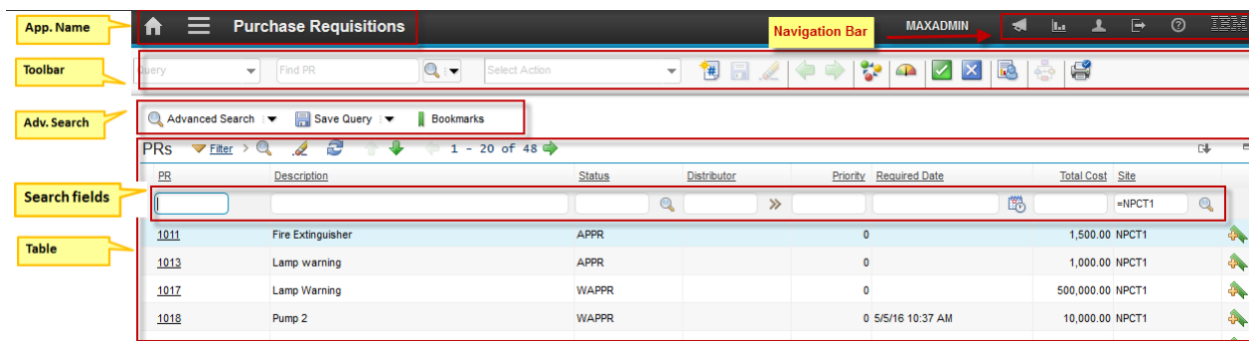

- Via Start Center
Users can add favorite applications to their Start Center for easy access. Groups with Start Center templates will have a pre-defined list of applications.

3.3 Application User Interface Elements Overview

Most of Maximo applications is formatted with List and details shown in figure below:

There are some components explained as follows:

1. Application Name

In every opened applications you will be informed the name of the application in upper left corner of the screen.

2. Toolbar

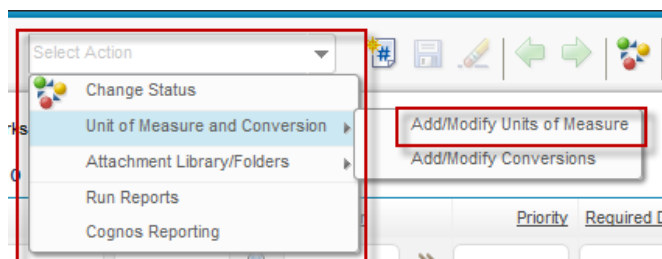

Toolbar have 3 section :

a. Search Toolbar

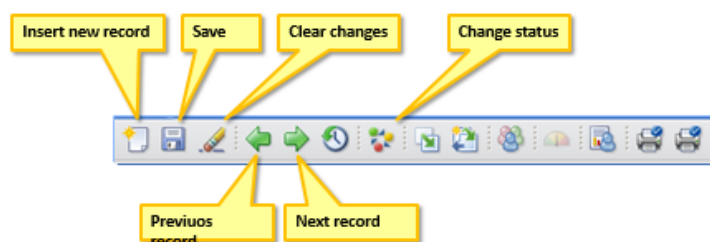

You can doing various data searching method described in the next section later.

b. Select Action

Different actions will be displayed depend on application that you open:

c. Toolbar Button

- Insert New Record : Create record
- Save : after you edit in the new or existing record click save button to commit the changes you have made
- Clear Changes: Clear the changes you have been made in new or existing record
- Change Status : in every record that statusable, you can change the status of record.
- Previous Record : Go to previous record of result set in the list
- Next Record : Go to next record of result set in the list

3. Table

List all of the record or filtered by user the data depend on application that you open.

Table Filter
Opens the filter fields row

Find
Filters the table based on the filter fields

Refresh
Forces the reload of the records

Sort
Click on a column header to sort

Download
Downloads table as an Excel worksheet

Filter Fields

Previous/Next Page Records Count

Previous/Next Row

Record ID
Opens the record details page

Use '=' for exact matching

Asset	Description	Location	Parent	Rotating Item	Site
13143	Pump 100 GPM 60 FT-HD	BR430	11400	PUMP100	BEDFORD
11450	Centrifugal Pump	BR450	11400	PUMP100	BEDFORD
11480	Centrifugal Pump 100 GPM 60 FT-HD	GARAGE		PUMP100	BEDFORD
12222	Centrifugal Pump	CENTRAL		PUMP100	BEDFORD
CROSS_SITE		CENTRAL		PUMP100	BEDFORD
2131	Rotary	CENTRAL		P-896	BEDFORD

4. Search Fields

The place you can filter the data on the table by specific requirement that you need.

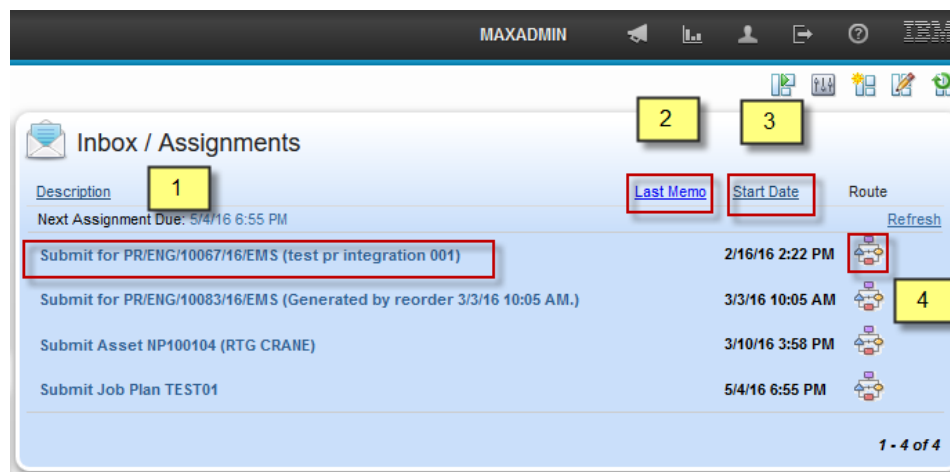

5. Advance Search

6. Navigation Bar

3.4 Inbox Assignment and Route Workflow Data

Inbox/Assignments is one of the portlets that you might see on your Start Center. The portlet lists your task assignments. You use the inbox to review assignments, to route assignments, and to complete assignments.

A task assignment is a record that is routed to you for action, based on information in a workflow process, in example is approval task. You must complete the assignments before a record can move to the next step in a workflow process.

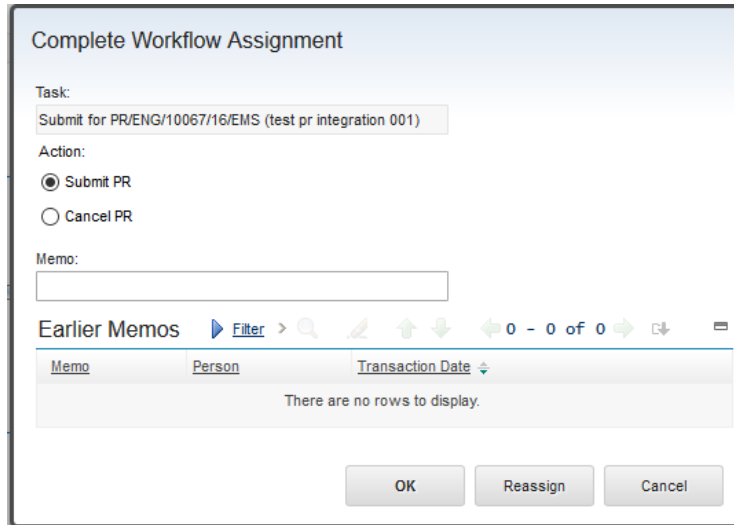

1. **Description** - Description of the assignment that you get. In the description you can click it for go to the record (PR, Workorder, PO, Job Plan, PM) details.
2. **Last Memo** – Last memo from prior assignee person.
3. **Start Date** - Date that you get this assignment
4. **Route Workflow** button – Button to complete your task/assignment

Completing workflow assignments

You can complete workflow assignments to complete a task and to route the task to the next assignee. You can view and edit memos that are entered by individuals who have previously reviewed the record or assignment. You can also write memos to task assignees.

1. Perform one of the following actions:
 - In the workflow inbox, select Route.
 - In a Workflow-enabled application, click Route Workflow.
 - In the Workflow window, click Complete an Assignment.

The dialog box is titled "Complete Workflow Assignment". It contains the following fields and controls:

- Task:** A text field containing "Submit for PR/ENG/10067/16/EMS (test pr integration 001)".
- Action:** Two radio buttons: "Submit PR" (selected) and "Cancel PR".
- Memo:** An empty text field.
- Earlier Memos:** A table with columns "Memo", "Person", and "Transaction Date". The table is empty, with a message "There are no rows to display." below it.
- Buttons:** "OK", "Reassign", and "Cancel" at the bottom right.

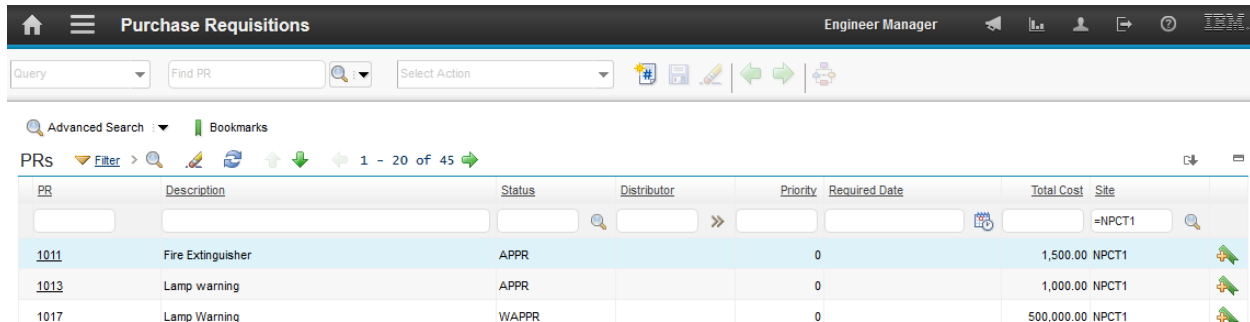

2. Select an action.
3. In the Memo field, enter a memo value.
4. Click Reassign, to assign the task to another individual.
5. Click OK.

The result is the task is placed in the workflow inbox of the assigned person. The memo that you entered is added to the record workflow history. The next person in the process flow can view your memo in the Earlier Memos table window

4 Query and Searching Data

4.1 Overview

Maximo stores its information in a database. Requests to find information in the database are called queries. When you open a Maximo application, Maximo displays the List tab which displays the result of your default saved query. If you do not have a default saved query Maximo does not display a result set.

PR	Description	Status	Distributor	Priority	Required Date	Total Cost	Site
1011	Fire Extinguisher	APPR		0		1,500.00	NPCT1
1013	Lamp warning	APPR		0		1,000.00	NPCT1
1017	Lamp Warning	WAPPR		0		500,000.00	NPCT1

Because most applications open to the List tab, you can execute several actions from the tab:

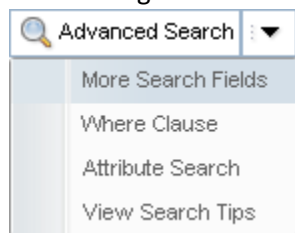

- Execute a saved query from the Query menu. 
- Perform a key field search with Find field. (Must input the exact record ID) 
- Create a new record by clicking the New <Record> button on the toolbar, for example New Work Order. 
- Perform any of the actions available via the Search Toolbar. (see later)
- Select the Select Records ☒ Select Records check box, select one or more records, and select an action from the Select Action  menu to perform on the record(s), for example to perform a status change on a group of records.

4.2 Using the search toolbar

The Search Toolbar appears on the List tab, allowing you to perform several different search related actions. When you enter a query, Maximo uses Structured Query Language (SQL) to retrieve the data from the database. You do not need to know SQL to conduct basic searches of the Maximo database. The Search Toolbar contains actions that allow for both SQL and non-SQL based queries. The results of your query are displayed in a table window below the Search Toolbar.

 Advanced Search  Save Query  Bookmarks

The triangle next to **Advance Search** button activates a menu of additional options:

- **More Search Fields.** Click to access additional record fields for query by example (QBE) searches.
- **WHERE Clause.** Click to view your current structured query language (SQL) WHERE clause or to construct a new WHERE clause to use to search the database.
- **Attribute Search.** Click to search using particular value of attribute.
- **View Search Tips.** Click to view a help topic containing tips for searching the Maximo database.

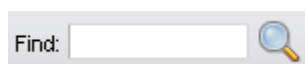

The triangle next to the **Save Query** button activates a menu of additional Saved Query options:

- **Save Current Query.** Click to name and save your current query so that you can reuse it at a later time
- **View/Manage Queries.** Click to view and manage your saved queries for the current application.

4.3 Basic Search

Using the Find Field to Search

You can use the Find field in the Maximo toolbar to search for a single record by the record ID or key field. For example, in Work Order Tracking, the search is by work order number. You can use the Find field to search from any tab in the application.

NOTE: You must know the exact record ID to search using the Find field. Entering a partial record ID will not return any results.

To search using the Find field, complete the following steps:

1. Enter a record ID in the Find field.
2. Click the Quick Key Search button (loop).

Using the Table Filter to Refine Search Results

Work Orders  1 - 6 of 6								
Work Order	Description	Location	Asset	Status	Scheduled Start	Priority	Work Group	Site
				=APPR				=TANJUNG01
WO1125	install OVAL type LDO flow meter of LDO DG tank outlet	00EGF10BB010		APPR		30	INST	TANJUNG01
WO1126	Repair or Fix LDO line leaks Of WTP Fuel Oil Tank			APPR		20	MECH	TANJUNG01
WO1129	Make up Lube oil gear box #2 CT fan	COOLINGTOWER		APPR		10	MECH	TANJUNG01
WO1378	compressor #3 need to service due to running hour 1000 hr	00SCA30AN010-M01	00SCA30AN010-M01	APPR		30	MECH	TANJUNG01
WO1413	Please Repair gasket Flange Flow meter Back wash	00GBP73CF001	3619	APPR		40	MECH	TANJUNG01
WO2018	Testing Add Sparepart to Rotating Item	BOILER02	5781	APPR		30	MECH	TANJUNG01

The List tab displays query results in a table window. Maximo table windows include a filter to help you locate specific rows in large tables by reducing the number of rows displayed.

The table filter appears at the top of the table window as a row of editable fields appearing between the column headers and the first row of the table, as shown in the above figure.

To filter a table window, complete the following steps:

1. If necessary, click the **Filter** icon. The filter opens and the **Filter Table** button appears.
2. Enter a value in one or more of the filter fields. You can enter partial values.

TIP: Use the equals sign (=) for an exact match. For example, filtering records with a status of "APPR" will also return records that have a status of "WAPPR" unless you type "=APPR" in the status field.

3. Click the **Filter Table** button (loop) or press **Enter**. Maximo filters the table window and the **Clear Filter Fields** button appears.

If there are no rows that match your filter criteria, a message displays in the table window, for example "No work orders found."

4. To filter using different criteria, click the **Clear Filter Fields** button to return to the original result set.

NOTE: The **Clear Filter Fields** button only appears when the rows displayed in a table has been filtered.

4.4 Advance Search

The More Search Fields dialog box is for querying by example (QBE), meaning that you enter values in the on screen fields to provide Maximo with an example of the type of records you are searching for. For example, if you want to find all work orders with a status of waiting for approval, you would enter WAPPR in the Status field. You can enter values for each field that you want to have included in your query.

More Search Fields| Current Query:

PR: 	Status:
Requested By: »	Site: =NPCT1
Supervisor: »	History?: N
Contact: 	Internal?:
Company: »	Priority:
Ship To: 	Customer #:
Bill To: 	Storeroom:

4.5 Wildcard Character

Sometimes you do not know the exact value for a field you want to use in a query. For example, you remember only part of a work order number, but not the exact number. When you do not know the exact value, you can search using the partial value plus a wildcard character. A wildcard character is a special symbol that stands for one or more characters. A character is an individual letter or number.

Maximo Wildcard Characters

Maximo uses two wildcard characters:

- Use the underscore [_] to substitute for a single character.
- Use the percent sign [%] to substitute for a string of characters.

A string is any grouping of letters, numbers, or both. A word is an example of a string of letters.

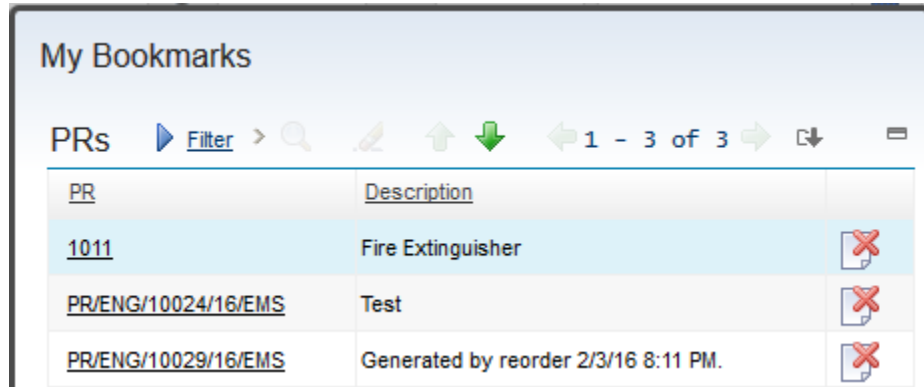

Placement of Wildcard Characters

When you use a wildcard character in a search field, place the wildcard character exactly where the unknown character(s) would occur. You can use more than one wildcard character in a single search.

- %X → all instances where X is the last in the string of characters
Example: %ing would return all instances where a word ended in -ing
- X% → all instances where X is the first in a string of characters
Example: M% would return all instances where the word started with the letter M
- %X% → all instances where X falls anywhere within the string of characters
Example: %3% would return all records with the number 3 anywhere in the field

4.6 Using Bookmark

The My Bookmarks dialog box displays all records that you have "bookmarked" for later review. The My Bookmarks dialog includes the record ID (key field), the Description of the record, and a Delete button for each bookmark. Bookmarks are associated with your user name. If you were to sign in under a different name, you would see a different Bookmarks list. Each application has a separate bookmark list. So for example, work orders bookmarked in the Work Order Tracking application will not be bookmarked in the Quick Reporting application.

PR	Description	
1011	Fire Extinguisher	
PR/ENG/10024/16/EMS	Test	
PR/ENG/10029/16/EMS	Generated by reorder 2/3/16 8:11 PM.	

Adding a Bookmark

You can add a record to your list of Bookmarks in two ways:

- From the List Tab : Click the Add to Bookmarks button for the record
- From any Application Tab : Select Add to Bookmarks from the Select Action menu to add the current record to your bookmarks.

Managing Bookmarks

Click Bookmarks on the Search toolbar to view the My Bookmarks dialog box, which lists all of the records you have bookmarked for a particular application.

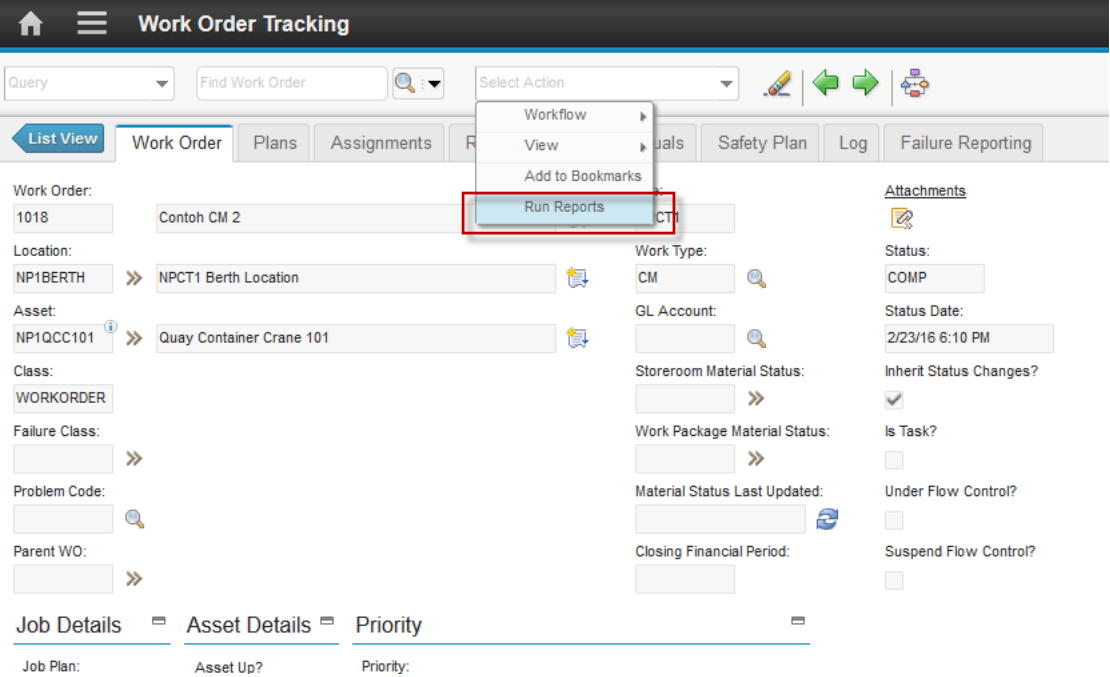

To remove a bookmark, click the Delete button for the record, the bookmark is deleted when you close the dialog box. This does not delete the record, only the bookmark.

NOTE: If you choose All Bookmarks from the Current Query menu, Maximo does not show a deleted record.

4.7 Running and Printing Report

Each Maximo application has different list of reports. When you are in an application and you need report information, there are several report actions from which you can choose to get that information. For example, you can run a report and then view its table of contents, print the report, and export the report data. You can open and view a report in a browser. You can directly print out a report, with or without attachments.

Follow steps below to Run Report:

Step	Action
1	In Example you need information about inventory. You can go to the Work Order Tracking Application, select one record, and then select Run Reports menu from Select Action.  Result : List of Reports and then Enter "COMP1%" as filter in field Description and then double click on Report Name "COMP1 – WOprint". Result:
