

Mastering Corrective Maintenance (CM) Workflows

00:18:53

SYSTEM: ONLINE

RESTORING ASSETS TO OPTIMAL CONDITION

CORRECTIVE MAINTENANCE:

✓ ACTIVE

Maintenance work initiated based on an unexpected asset or location failure.

THE PRIMARY OBJECTIVE:

The sole purpose of a CM work order is to return the asset to a satisfactory operating condition with minimal business disruption.

↑ GOAL

FAILURE DETECTION → CM INITIATION → ASSET RESTORATION → OPTIMAL CONDITION

OPERATIONAL EFFICIENCY: RESTORATION IN PROGRESS

ASSET ID: GC-204

MODEL: HEAVY-DUTY GANTRY

ASSET ID: GC-204

MODEL: HEAVY-DUTY GANTRY

SYSTEM STATUS: CRITICAL ALERT - FAILURE DETECTED

THE LIFECYCLE FLOW: PHYSICAL REALITY VS. SYSTEM STATUS

Actor: 
Service Engineer

Initiating the Corrective Record

The tablet screen displays a form with the following fields:

- Work Type: CM
- Asset: NP100106 Gantry Crane
- Requires Asset Downtime? ☒
- Job Plan:

Must be set to CM

NP100106
Gantry Crane

Critical routing trigger

Defines required
resources

ROUTING THE WORKFLOW

1. Save Record

2. Route Workflow

3. Submit Work Order

A software dialog box titled "Manual Input". It features a radio button labeled "Submit Work Order" which is selected and highlighted with a green circle. Below it is a text field labeled "Memo:". At the bottom right, there are two buttons: "OK" (highlighted with a green border) and "Cancel".

The Conditional Routing Logic

Parallel processing: A CM work order may require just one, both, or neither of these approvals depending on the physical demands of the fix.

Verifying Parts and Materials

Actor: CHE Engineer

Action: Review planned materials and check storeroom availability.

Decision: Issue existing materials OR trigger external procurement.

Complete Workflow Assignment

☒ Approve Work Order

SUBMIT

Mitigating Business Impact

Actor: Operations

Action: Review requested asset downtime against operational schedules.

Decision: Approve schedule to minimize business impact, OR request schedule revision.

Complete Workflow Assignment

☒ Approve Schedule

SUBMIT

The Dual Approval Gateways

Executing the Work Plan

Actor:
Service Engineer

With materials staged and operational downtime approved, the physical repair begins. The workflow assignment is completed in the Inbox.

Defining the Solution

A CM Work Order cannot simply be closed. Corporate regulation mandates that the cause of failure and the implemented solution must be explicitly defined.

Mandatory Data Entry:

Navigate to: Assets → Failure Codes

Physical Repair

**Mandatory
Data Entry**

CLOSE

The Anatomy of a Diagnostic Record

PROBLEM:

Define the specific problem that occurred.

REMEDY:

Document the precise solution implemented.

CAUSE:

Identify the root cause of the failure.

The Continuous Improvement Loop

Corrective Maintenance is not just about restoring an asset. It is a data generation engine. By strictly following the digital workflow and capturing precise Failure Codes, today's unexpected breakdowns become the blueprints for tomorrow's preventive strategies.
